

OTE Corporation Financial Tearsheet

Company Overview

Ocean Thermal Energy Corporation creates positive social impact by producing clean, renewable energy, as well as water for drinking, cooling, food production, and economic development.

Ocean Thermal Energy Conversion technology is a proven system that leverages the differences in seawater temperatures at various depths to produce energy -- at large, municipal scale. At the same time, the seawater used can be desalinated to serve as a parallel community resource.

OTE personnel were involved in OTEC research and development at the Natural Energy Laboratory of Hawaii Authority (www.nelha.com), where with U.S. Department of Energy support, a land-based OTEC facility was built. This facility operated from 1992-1998 and produced net power, proving that OTEC could provide viable clean energy without the use of fossil fuels. OTE engineers were also part of the team that built 'Mini-OTEC', a successful 1 MW floating OTEC system that also operated in Hawaii.

Since 2010, we've been focused on building our business. Investment dollars, raised thus far through our loyal and supportive shareholders, have provided us with the resources to recruit and hire great people, build a pipeline full of projects, advance our technology, and create jobs.

As we continue to grow, we will increase our visibility, build liquidity, and create future long term shareholder value.
